	PADD: IndG.A.P.:	Section III:	FR: 01: Annexure 3A - IndG.A.P. Control Points & Comp	oliance Criteria (CPCC) Checklist
	GOOD AGRICULTURAL PRACTICES -REQUIREMENTS			
	TABLE 01 REQUIREMENT AND EVALUATION CRITERIA			
			CONTROL POINTS AND COMPLIANCE CRITERIA	
CI. No.	Item	Level	Control Point	Compliance Criteria
		Level	RITERIA - COMBINABLE CROPS Control Point	Compliance Criteria
CC. NO.	COMBINABLE CRO		Control Point	Compliance Criteria
CC.1	PROPAGATION MAT			
CC.1.1	Choice of variety	LIUAL		
CC.1.1.1	Basis of choice	Major	Is the choice of variety based on acceptable agronomic performance in the local conditions?	The producer must be able to demonstrate the varieties grown meet these requirements either through official trials (variety lists), seed supplier information or customer requirements.
CC.1.2	Seed/Rootstock Qual	ity and Origi		
CC.1.2.1	Purchase Records	Major	Are purchased/exchanged seeds accompanied by records of variety name, batch number, supplier, seed certification details, if certified, and are seed treatment records retained?	Producer must provide records of variety name, batch number, supplier, seed certification details, if certified, and seed treatments applied.
CC.1.2.2	Record of home saved seeds	Major	Do home-saved seed have available records of the identity, source, treatments applied (e.g. cleaning and seed treatments)?	Producer must keep records and have them available on the farm.
CC.2	IRRIGATION/FERTIO	GATION		
CC.2.1	Quality of irrigation wa	ater		
CC.2.1.1		Major	According to the risk analysis (CB.6.3.2), does the analysis consider the microbial, physical and chemical contaminants?	According to the risk analysis, there is a documented record of the relevant microbial, chemical or heavy metal contaminants.
CC.2.1.2	Risk management	Major	If the risk analysis so requires, have adverse results been acted upon?	Records are available of corrective actions or decisions taken.
CC.3	MACHINERY AND E	QUIPMENT		
CC.3.1	Hygiene			
CC.3.1.1	Cleanliness of transport	Critical	Are lorries/trucks and trailers carrying crops or stock feed clean and fit for the purpose of carrying raw materials entering into the food chain, with particular care given to the cleanliness of dual-purpose trailers to prevent contamination?	Workers to demonstrate awareness at interview and visual assessment of transport vehicles. Type of cleaning must be appropriate to clean what was being previously transported. No N/A unless no supplement feeding of livestock on farm.
CC.3.1.2	Prevention of contamination	Critical	Are all bulk loaders used for loading crops or stock feed cleaned prior to use, with particular care given to the cleanliness of dual purpose loaders, to prevent contamination?	Visual assessment that bulk loaders are kept in a clean, dry and fit state to avoid harm to the goods being carried inside.
CC.3.1.3	Maintenance record	Critical	Is crop or forage conditioning equipment serviced and cleaned in accordance with manufacturers' instructions and are records maintained?	Records must be available, together with manufacturers' instructions. N/A if no relevant equipment is used.
CC.4	CROP PROTECTION	1		
CC.4.1	Choice of Chemicals			
CC.4.1.1	Compliance with local restrictions	Critical	Are restrictions imposed by national or local legislation on plant protection product application methodology complied with?	Where national or local legislation imposes restrictions on methods of plant protection product application (for example: distance to water ways while spraying etc.) producer must show knowledge at interview and demonstrate compliance
CC.5	HARVESTING			
CC.5.1.1		Major	Do workers receive basic instructions in hygiene before handling crops destined for food or feed?	There must be evidence that the workers received training, regarding hygiene basic instructions (i.e. use of jewellery, contamination with foreign bodies, etc.).
CC.5.1.2	toilets	Major	Do harvest workers have access to clean toilets in the vicinity of their work?	Fixed or mobile toilets (including pit latrines) constructed of materials that are easy to clean and with catch basins designed to prevent contamination in the field are accessible to harvest workers within 500m and they are in a good state of hygiene. Where an employee is working independently, the 500m distance can be modified to allow the presence of toilets at an increased distance, providing that there is reasonable and adequate transport available to the worker.
CC.6 CC.6.1	HARVESTED CROP Hygiene	HANDLING		

before handling product? training, regarding transmissic communicable diseases, personand clothing, i.e. hand washin jewelsery and ingernal selegh in personal behaviour, i.e. no sen caling, chewing, particulous instructions of inspection of insp

chemicals applied to the harves observed.					and packaging/delivery dates of treated products, which demonstrate that the label instructions for chemicals applied to the harvested crop have been

			-	
CC.6.4.2	Registration of biocides	Critical	Are only biocides and plant protection products used that are officially registered in the country of use, and for use post-harvest on the harvested crop being protected?	All the post harvest biocides and plant protection products used on harvested crop are officially registered or permitted by the appropriate governmental organization in the country of application and are approved for use in the country of application and are approved for use on the harvested crop to which it is applied as indicated on the biocides and plant protection products' labels. Where no official registration scheme exists, refer to the IndG.A.P. guideline on this subject and FAO International Code of Conduct on the Distribution and Use of Pesticides
CC.6.4.3	Restrictions on biocides	Critical	Are only biocides and plant protection products used on harvested crop destined for sale in the target country that are not banned in that country?	The documented post harvest biocide and plant protection product application records confirm that no biocides and plant protection products have been used within the last 12 months on the harvested crop grown under IndG.A.P. destined for sale within the target country.
CC.6.4.4	List of biocides	Major	Is an up-to-date list maintained of post-harvest plant protection products that are used, and approved for use, on crops being grown?	An up to date documented list, that takes into account any changes in local and national legislation for biocides, waxes and plant protection products is available for the commercial brand names (including any active ingredient composition) that are used as post-harvest protection being, or which have been, grown on the farm under IndG.A.P. within the last 12 months. No N/A.
CC.6.4.5	Competence of responsible person	Critical	Is the technically responsible person for the harvested crop handling process able to demonstrate competence and knowledge with regard to the application of biocides and plant protection products?	The technically responsible person for the post harvest biocides and plant protection products applications can demonstrate sufficient level of technical competence via nationally recognized certificates or formal training.
CC.6.4.6	Record of identity of biocides	Critical	Have the post-harvest biocides and plant protection product applications, including the harvested crops' identity (i.e. lot or batch of produce), been recorded?	The lot or batch of harvested crop treated is documented in all post harvest biocide and plant protection product application records. Lot/batch Identifiers used may follow standardized data structures with standardized identifiers for each data string
CC.6.4.7	Record of application of biocides	Critical	Has the application of the post-harvest biocides and plant protection product applications been recorded?	
CC.6.4.8	Record of application dates	Critical	Have the application dates of the post-harvest biocide and plant protection product been recorded?	The exact dates (day/month/year) of the applications are documented in all post-harvest biocide and plant protection product application records.
CC.6.4.9	Record of treatment type	Critical	Has the type of treatment been recorded for the post- harvest biocide and plant protection product applications?	The type of treatment used for product application (i.e. spraying, drenching, gassing etc.) is documented in all post-harvest biocide and plant protection product application records.
CC.6.4.10	Record of trade names	Critical	Has the product trade name of the post- harvest biocide and plant protection product applications been recorded?	The trade name and active ingredient of the products applied are documented in all post-harvest biocide and plant protection product application records.
CC.6.4.11	Record of quantity used	Critical	Has the product quantity applied of the post- harvest biocide and plant protection product applications been recorded?	The amount of product applied in weight or volume per litre of water or other carrier medium is recorded in all post-harvest biocide and plant protection product applications records.
CC.6.4.12	Record of operator	Major	Has the name of the operator of the post- harvest biocide and plant protection product applications been recorded?	The name of the operator who has applied the plant protection product to the harvested crop is documented in all post-harvest biocide and plant protection product application records.

CC.6.4.13	Record of justification	Major	Has the justification for application for the post-harvest biocide and plant protection product applications been recorded?	The common name of the pest, disease to be treated is documented in all post-harvest biocide and plant protection product application records.
CC.6.4.14	Complete record of chemical application	Critical	Are all of the post-harvest plant protection product applications also considered under points CB.8.6 of this document?	There is documentary evidence to demonstrate that the producer considers all post-harvest fungicide or insecticide applications under Control Points CB.8.6 of this document, and acts accordingly.
CC.6.5	Storage of Harvested	crop		,
CC.6.5.1	Risk prevention	Critical	Is the risk of contamination by glass or any other physical contaminants prevented?	Light bulbs and fixtures suspended above harvested crop or material used for harvested crop handling are of a safety type or are protected/shielded so as to prevent contamination of food in case of breakage. The risk for contamination with any other physical contaminants must also be prevented. This applies to temporary holdings, long-term stores and all
CC.6.5.2	Restriction on domestic animals	Critical	Is access of domestic animals and birds to the facilities restricted?	nroduct movement areas. Domestic animal and bird access to facilities is managed, to prevent harvested crop contamination.
CC.6.5.3	Storage procedure	Critical	Is a specific storage procedure required for longer-term product storage?	Where longer term storage takes place, producer to demonstrate compliance by means of records detailing the regular checking and follow up actions, such as: regular monitoring of temperature and condition of product, including investigation of any changes. Bird and rodent activity, Water ingress, and hot spots within the heap must have been acted upon and remedied. The frequency of inspection may be reduced once the condition of the crop has stabilized. No N/A unless no longer term storage.
CC.6.5.4	Risk minimization	Critical	Is storage adapted to type of product and conditions; is implementation of best practice encouraged minimizing risk of contamination?	Storage may be inside or outside. The storage conditions are adapted to the type of product and conditions (weatherproof, solid floors, suitable walls and doors, etc.).
CC.6.5.5	Harvested crop conditioning	Critical	Do harvested crops, susceptible to deterioration and, which are stored for more than a few days in conditions that may lead to their deterioration, have conditioning? Does long term-stored product have a moisture content and temperature suitable for storage?	Damage caused by heating must be avoided. Product conditioning equipment must be available where applicable and producer to demonstrate compliance at interview. No N/A unless no storage for more than a few days.
CC.6.5.6	Access to monitoring devices	Critical	Does the responsible person have easy access to product storage monitoring devices if they store harvested crops?	The responsible person must demonstrate compliance by showing evidence of the monitoring devices or policy.
CC.6.5.7	Maintenance	Minor	ls product-drying equipment regularly maintained in line with manufacturers' instructions and are the dates recorded?	Maintenance records and manufacturer's instructions should be available.
CC.6.5.8	Loading condition	Minor	In the case of flat product stores are hard outside loading areas maintained in a clean and well-drained condition?	Loading areas should be clean with no dips and areas where standing water can gather.
CC.6.6	Haulage			
CC.6.6.1	Covering of vehicles	Major	Is ex-farm transport carried out by the producer covered once loaded and during transit?	Farmer/operatives must demonstrate compliance on interview.
